

## DIY MORE OLED 2.42" SSD1309 128x64 MOD

If you bought the DIY MORE OLED and it doesn't work, then you are missing a 1-10mF cap from RES<->VCC

I'm no electronics guy by far, but, reading Arduino forums, it should be 10uF, but that wasn't working for me, so I experimented and mine works with 1uF almost perfect (1 out 30 cold power-ons (after being off for hours), I have to turn it off and back on, other than that it just works now. Good enough for me.
